START HERE

Your health is the one supply you carry everywhere

Most people prepare for hard times with food, water and a generator. Few prepare the body that has to get them through it. When a storm, a job loss or a pandemic hits, the families who do best are the ones whose bodies and minds were strong before it started.

This checklist walks you and your family through the **8 laws of health**, known as **NEW START**. It starts with two **Prep Essentials** every family needs on paper before a crisis: your blood pressure numbers and your medicine list. Then each law gets one page: why it matters, a 7-point checklist for each person in your home, and one prep step you can take this week.

How to use it

1. This week, do the two Prep Essentials: start your 7-day blood pressure log and write your medicine list.
2. Then read one law a day. Don't rush it.
3. Check every statement that is true *today*, not what you plan to do.
4. Fill in a column for each family member. Use one column for all the kids, or print extra copies.
5. Count your checks for each law (out of 7) and carry them to the Family Scorecard.
6. Start with your lowest-scoring law and follow the 90-day plan on page 14.

N	**Nutrition** — What you eat builds the army that defends you.
E	**Exercise** — A body that moves daily is a body that can respond in a crisis.
W	**Water** — Every cell, every organ and every immune response depends on water.
S	**Sunlight** — Light sets your body clock and helps your skin make vitamin D.
T	**Temperance** — Moderation in good things. Elimination of harmful things.
A	**Air** — Breath is the first thing you need and the last thing you think about.
R	**Rest** — Rest is repair: for the body, the mind and the heart.
T	**Trust in God** — Fear weakens the body. Faith steadies it.

This guide is education, not medical care. Keep taking prescribed medication and talk with your clinician before making major changes, especially if you have a health condition.

PREP ESSENTIAL 1 · DAYS 1 TO 14

Know your numbers

You can't prepare what you haven't measured.

Get the right cuff

- Use an upper-arm cuff that has been validated for accuracy. The U.S. Validated Device Listing is at **validatebp.org**.
- Keep spare batteries with your emergency supplies.

Measure the right way

- Sit quietly for 5 minutes, back supported, feet flat, arm resting at heart level.
- Take 2 readings, 1 minute apart. Measure morning and evening for 7 days.
- Write every reading in your 7-day log on page 14 and bring it to your doctor.
- Ask your doctor what your goal numbers are. If you have diabetes or prediabetes, ask for your A1C and blood sugar goals.

My goal numbers: Blood pressure _____ / _____ A1C _____ Fasting sugar _____

KNOW YOUR DANGER LINE

If a reading is **180/120 or higher**, rest 5 minutes and check again. If it is still that high **and** you have chest pain, trouble breathing, back pain, numbness or weakness, vision change, or trouble speaking, **call 911**. If you have none of those, **call your doctor right away**.

Post this page on the fridge. Make sure everyone in the house knows the danger line.

PREP ESSENTIAL 2 · DAYS 1 TO 14

Medicines and supplies

Write it down now, while it's easy.

My medicine list

Medicine	Dose	What it's for	When I take it

Allergies: _____

Doctor & phone: _____ Pharmacy & phone: _____

Supply checklist

Check all that are true today	Me	Spouse	Kids
Paper copy of this list kept with my emergency supplies	☐	☐	☐
Prescriptions filled and not expired	☐	☐	☐
Asked my doctor or pharmacist about keeping an extra supply on hand	☐	☐	☐
Medicines stored as the label says (heat and moisture damage them)	☐	☐	☐
Spare batteries for cuff and meters; test strips if I use a glucose meter	☐	☐	☐
Basic first-aid kit, spare glasses and anything I use every day	☐	☐	☐

Never stop or change a medicine on your own

If something feels wrong, call your doctor or pharmacist. The 8 laws work alongside your doctor's plan, not instead of it.

LAW 1 OF 8 · N

Nutrition

What you eat builds the army that defends you.

Why it matters

About 70% of your immune tissue lives in your gut, and it is fed by fiber. Animal foods contain no fiber. Whole plant foods (beans, greens, whole grains, fruit, nuts, seeds) feed the gut bacteria that make short-chain fatty acids, which help calm inflammation.

Meat: The World Health Organization's cancer agency classifies processed meat (bacon, ham, hot dogs, deli meat) as a Group 1 carcinogen and red meat as “probably carcinogenic,” mainly for colorectal cancer. Meat is also a major source of saturated fat, which raises LDL cholesterol.

Dairy: Roughly two out of three adults worldwide lose some ability to digest lactose after childhood. Whole-milk dairy and cheese are leading sources of saturated fat, and cheese is high in sodium.

Processed foods: Diets high in ultra-processed foods are linked to higher rates of heart disease, type 2 diabetes and early death. About 70% of the sodium Americans eat comes from packaged and restaurant food, which drives up blood pressure. High blood sugar from refined foods also weakens the white cells that fight infection.

Your checklist

Check all that are true today	Me	Spouse	Kids
Most of my plate is whole plant foods at most meals	☐	☐	☐
I eat beans, lentils or peas most days	☐	☐	☐
I eat at least 5 servings of vegetables and fruit daily	☐	☐	☐
I have cut out processed meats (bacon, deli meat, hot dogs, sausage)	☐	☐	☐
I have removed or am reducing meat and dairy	☐	☐	☐
I rarely eat packaged snacks, fast food or sugary drinks	☐	☐	☐
I read labels and keep sodium and added sugar low	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Pantry prep: beat the salt and sugar trap

Many canned and boxed prep foods are loaded with sodium. On the label, 5% Daily Value of sodium or less per serving is low; 20% or more is high (FDA). Stock dried beans, lentils and split peas; oats, brown rice and quinoa; “no salt added” canned beans, tomatoes and vegetables; fruit canned in water or its own juice; nuts, seeds and nut butters; unsweetened shelf-stable soy or almond milk. Season with herbs, garlic and onion powder. Skip potassium salt substitutes unless your doctor says yes.

LAW 2 OF 8 · E

Exercise

A body that moves daily is a body that can respond in a crisis.

Why it matters

Adults need at least 150 minutes of moderate movement a week (about 30 minutes, 5 days) plus muscle strengthening 2 days a week. Regular movement lowers blood pressure, improves blood sugar control and helps immune cells circulate through the body.

Long hours of sitting carry their own risk, even for people who work out. Getting up every 30–60 minutes matters.

Your checklist

Check all that are true today	Me	Spouse	Kids
I move on purpose at least 30 minutes most days	☐	☐	☐
I walk outdoors at least 3 times a week	☐	☐	☐
I do strength work (body weight, bands, lifting) 2+ days a week	☐	☐	☐
I stand up and move at least every hour when sitting	☐	☐	☐
I can climb 2 flights of stairs without stopping	☐	☐	☐
I could walk 3 miles today if I had to	☐	☐	☐
My family moves together (walks, yard work, play) each week	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Prep question

In an emergency, could you carry a child, haul water or walk out on foot? Minutes moved per day: Me ____ Spouse ____ Kids ____

LAW 3 OF 8 · W

Water

Every cell, every organ and every immune response depends on water.

Why it matters

Mild dehydration can bring fatigue, headaches and poor focus, and it thickens the blood. Pale-yellow urine is a simple daily check. Drinking water first thing in the morning and between meals keeps you ahead of thirst.

Water is also the first thing that disappears in a crisis. Ready.gov advises at least one gallon per person per day for several days, and the Red Cross suggests a two-week supply at home.

Your checklist

Check all that are true today	Me	Spouse	Kids
I drink about 8 glasses of plain water daily	☐	☐	☐
I drink 1–2 glasses of water when I wake up	☐	☐	☐
My urine is usually pale yellow	☐	☐	☐
Sugary drinks and sodas are not part of my day	☐	☐	☐
I have a water filter at home	☐	☐	☐
My home has a stored supply of 1 gallon per person per day	☐	☐	☐
My family knows how to make water safe (boil, filter, purify)	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Storage prep

Family of 5 × 1 gallon × 14 days = 70 gallons. Rotate stored water every 6 months.

LAW 4 OF 8 · S

Sunlight

Light sets your body clock and helps your skin make vitamin D.

Why it matters

Morning daylight in your eyes helps set your circadian rhythm, which governs sleep, hormones and energy. Sunlight on the skin is the body's main source of vitamin D, which plays a role in immune function.

Most people spend over 90% of their time indoors. Short, regular sun exposure without burning is the goal.

Your checklist

Check all that are true today	Me	Spouse	Kids
I get outside in daylight within an hour of waking	☐	☐	☐
I get 15–30 minutes of sun on my skin most days (without burning)	☐	☐	☐
I open blinds and let natural light into my home	☐	☐	☐
I dim screens and lights in the evening	☐	☐	☐
My children play outside every day	☐	☐	☐
I know my vitamin D level (ask your doctor)	☐	☐	☐
I take sun breaks during the workday	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Prep tip

Plan for winter: in northern states the sun is too low for much vitamin D from about November to March. Ask your clinician whether testing makes sense for your family.

LAW 5 OF 8 · T

Temperance

Moderation in good things. Elimination of harmful things.

Why it matters

Temperance means using good things wisely and removing what poisons the body. Alcohol, tobacco and vaping, stimulant and energy drinks, and overeating all weaken the immune system and raise blood pressure.

Temperance also applies to screens, work and spending. Overdoing even good things wears down body and mind.

Your checklist

Check all that are true today	Me	Spouse	Kids
I do not use tobacco or vape	☐	☐	☐
I do not drink alcohol	☐	☐	☐
I avoid stimulant and energy drinks	☐	☐	☐
I stop eating before I am overfull	☐	☐	☐
I do not eat late at night	☐	☐	☐
My screen time outside work is under 2 hours a day	☐	☐	☐
I use natural cleaning and personal-care products where I can	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Prep tip

Do a home toxin sweep: under the sink, the bathroom cabinet and the garage. Fewer harsh chemicals means fewer exposures for your kids.

LAW 6 OF 8 · A

Air

Breath is the first thing you need and the last thing you think about.

Why it matters

The EPA reports that indoor air is often 2 to 5 times more polluted than outdoor air. Fresh air and ventilation dilute indoor pollutants, and slow, deep breathing helps shift the nervous system out of fight-or-flight and can help lower blood pressure.

Your checklist

Check all that are true today	Me	Spouse	Kids
I spend time outside breathing fresh air daily	☐	☐	☐
I open windows at home when weather allows	☐	☐	☐
I take slow, deep breaths outdoors each day	☐	☐	☐
I breathe through my nose most of the time	☐	☐	☐
Our home is smoke-free	☐	☐	☐
I change my furnace or air filter on schedule	☐	☐	☐
Our home has working smoke and carbon monoxide detectors	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Try it today

Step outside. Breathe in through your nose for 4 counts, hold for 4, out through your mouth for 6. Repeat 6 times. Do it with your kids.

LAW 7 OF 8 · R

Rest

Rest is repair: for the body, the mind and the heart.

Why it matters

Adults need 7–9 hours of sleep; aim for 8. Sleep is when the body repairs tissue and builds immune memory. In one study, people sleeping under 6 hours were about four times more likely to catch a cold when exposed to the virus than those sleeping 7 or more.

Rest is more than sleep. A weekly Sabbath rest, peace of mind and a quiet heart are part of how the body heals.

Your checklist

Check all that are true today	Me	Spouse	Kids
I sleep 7–9 hours most nights	☐	☐	☐
I go to bed and wake at about the same time	☐	☐	☐
My bedroom is dark, cool and quiet	☐	☐	☐
I keep a full day of rest each week (Sabbath)	☐	☐	☐
I am at peace in my mind most days	☐	☐	☐
I am at peace in my heart (no unresolved anger or unforgiveness)	☐	☐	☐
My body feels rested when I wake up	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Prep question

Hours of sleep last night: Me ____ Spouse ____ Kids ____

LAW 8 OF 8 · T

Trust in God

Fear weakens the body. Faith steadies it.

Why it matters

Long-term stress keeps cortisol high, which raises blood pressure and suppresses immune defenses. Trust in God is the foundation the other seven laws stand on. Prayer, Scripture, gratitude and forgiveness quiet fear and bring the heart to rest.

This law asks: Where is my reliance? Am I aware, through the day, that I depend on God?

Your checklist

Check all that are true today	Me	Spouse	Kids
I pray daily	☐	☐	☐
I read Scripture daily	☐	☐	☐
I bring my worries to God instead of carrying them alone	☐	☐	☐
I practice gratitude and name blessings each day	☐	☐	☐
I am mindful of my reliance on God through the day	☐	☐	☐
I have forgiven those who have hurt me	☐	☐	☐
My family prays and worships together	☐	☐	☐

Your score for this law: count your checks (Me column) _____ / 7 — carry it to the Family Scorecard on page 13.

Reflection

What fear am I holding onto that I need to hand to God this week?

PUT IT TOGETHER

Family Scorecard

Enter each person's score (out of 7) for every law. Circle anything under 4. That is where your family's preparation starts.

Law	Me	Spouse	Child 1	Child 2	Child 3
N Nutrition					
E Exercise					
W Water					
S Sunlight					
T Temperance					
A Air					
R Rest					
T Trust in God					
TOTAL (out of 56)					

What your total means

45–56	**Well prepared** — Keep it up and help someone else get ready.
30–44	**Partly prepared** — Pick your two lowest laws and work on them this month.
Under 30	**Not ready yet** — Start today with one law. You don't have to fix everything at once.

My first step this week

Lowest law: _____ One change I will make: _____

YOUR ROADMAP

Your 90-day plan

Days 1–14

Cuff and 7-day log. Goal numbers. Medicine list written. Prescriptions filled. Score all 8 laws.

Days 15–45

Water stored. Pantry swaps for salt and sugar, a few items each week. Work on your two lowest laws.

Days 46–90

Move most days, 7–9 hours of sleep, daily fresh air, prayer. Repeat your 7-day log and re-score.

Your 7-day blood pressure log

Two readings each time, 1 minute apart. Do this in days 1–14, and again in your last 2 weeks.

Day	Morning #1	Morning #2	Evening #1	Evening #2	Notes
1					
2					
3					
4					
5					
6					
7					

Reading 180/120 or higher? See the danger line on page 3.

NEXT STEP

Knowing your score is the start. Living the 8 laws is the preparation.

Annie and I teach a free live masterclass, **Life Beyond the Numbers**. We walk you through how to apply these laws in real life: what to change first, how to bring your family along, and how to build habits that hold when life gets hard.
