How to Track Your Blood Pressure

Consistent, accurate BP tracking is the foundation of everything else in this kit. Without data, you're guessing. With data, you're proving. Here's the protocol:

- **When:** Take 3 readings every morning BEFORE caffeine, food, or getting active. Also take 1 evening reading before bed.
- **Position:** Sit with back supported, feet flat on floor, arm at heart level, cuff on bare skin (not over clothing).
- **Rest first:** Sit quietly for 5 minutes before your first reading.
- **No talking:** Don't talk during the reading.
- **Record all 3 morning readings** then calculate the average. The average is your true number for that day.
- **Bring this log to every doctor appointment.** Doctors take home BP data very seriously—it's often more accurate than in-office readings.

When to Seek Immediate Medical Attention:

If your reading is 180/120 or higher AND you have symptoms (severe headache, chest pain, shortness of breath, vision changes, numbness)—call 911. This is a hypertensive crisis.
